

- Git
- Vue.js
- Django
- Angular

Correct

Correct! Git is a version control system used to save and view different versions of your code

4. Which process automatically builds and tests your code?

1 / 1 point

- CI (Continuous Integration)
- CD (Continuous Delivery)

Correct

Correct! Continuous Integration (CI) is a process that automatically builds and tests your code whenever changes are committed to a shared repository.

5. True or False: JavaScript can be used for both front-end and back-end development.

1 / 1 point

- False
- Correct**

Correct! Version control systems attribute changes to specific authors, so you can see who made the modifications to the code. This is useful for accountability and collaboration within a team.
- When the changes were made
- Correct**

Correct! Version control systems also track when changes were made, allowing you to view a timeline of when each modification occurred.
- Debugging the errors in the code

3. Which of the following is not a development framework?

1 / 1 point

- Git
- Vue.js
- Django
- Angular

Correct

4. Which process automatically builds and tests your code?

1 / 1 point

- CI (Continuous Integration)
- CD (Continuous Delivery)

4. Which process automatically builds and tests your code?

1 / 1 point
